“Water, Nature’s Most Precious Commodity”

Water is one of our most valuable and important resources. Water not only helps humans to survive but also helps our environment and all living things in it. Water is so precious and important that sometimes people take it for granted and tend to misuse it. Conserving water and protecting our planet is an important part of our future. Let’s read about some ways water is so precious and on how we can conserve it.

Water is an important resource because it is used daily all around the world. Water is used to keep your body hydrated and healthy. Without water humans would start to develop health issues that would impact a persons and family lifestyle. Water is important to animals because animals need fresh water for their bodies to function. They get water by drinking it and also by the food they eat. Animals need water to keep their bodies cool and functioning well. Water is important for our plants and rainforest because it keeps them alive and looking beautiful. Water also keeps our lakes and oceans full. Animals who live in these types of environments need the water to survive. Sometimes natural disasters cause our environment to get polluted and our water to be infected by bacteria and other harmful chemicals. This will put our animals, plants, humans and all living creatures in danger. This affects everyone on the planet. The polluted water goes into our drinking system and then into our homes. This water is also used for our crops and animals and if it is full of bacteria it puts everyone and everything in danger. In some countries water is so scarce that families do not have clean water to drink. Children get sick and they have no other resources to keep them safe and healthy this is why it is important to take care of and conserve our water.

Keeping our water system clean is a great way to keep our environment and every living thing on it safe and healthy. Everyone working together and doing their part helps our planet. What are some ways that you can help your community keep their water system safe and help preserve our most precious commodity.
